timber

30. October 2025

Final class of the woody age stages, in which the mean diameter at breast height (DBH) of dominant trees exceeds 20 cm (thresholds may vary regionally, e.g. from 15 cm in Lower Saxony). Small timber: DBH up to 37.9 cm; medium timber: DBH up to 49.9 cm; large timber: DBH from 50 cm onward.
